BRADY WORKSTATION PRINT PARTNER

ENSURE LABEL CONSISTENCY, LOCK YOUR LABEL TEMPLATES!

Separate label completion and printing from label design

Brady Workstation Print Partner allows you to deploy a print-only version in your workplace, where label design capabilities should be disabled.

A label might be a crucial part in a traceability process, requiring consistency. Brady Workstation Print Partner ensures the user can not accidentally change the labels. Brady Workstation Print Partner comes with a simplified user interface, providing only the required label completion functionality, preventing the user from modifying the label template design.

In this way it reduces the need for training as well as human errors all at the same time!

Omit accidental label layout changes

Because end users never touch or modify the label creation templates, the labels are printed as intended without any accidental label layout changes.

Reduce time

The simplicity of Brady Workstation Print Partner allows users to start printing labels, without needing to understand the aspects of label creation. The user doesn't need extended user training, as he'll only be able to complete designated fields on a label template.

There are multiple ways to complete the label template:

- Manually

By typing the info in the designated fields

There is a choice to duplicate this data on multiple labels, in this way the content will be repeated on each printed label or only on one label.

- Import data from an Excel Sheet in just a few clicks by using the Excel import plug-in
- Serialized data can be created by inserting a sequence.

Print consistent labels in 1, 2, 3

1

Create Template:
Create your own or use an existing LabelMark 6 template. Save the file for access with the Print Partner app.

2

Complete Template:
Open, edit and complete your LabelMark 6 template within the Print Partner app.

3

Print Template:
Print your labels, using any printer with a Windows driver.

Other functionalities

- Template-sharing

Open a label template from any location available on your desktop. Be it:

- A local hard drive
- A shared network folder

- Recently used...

All the latest templates used show up in the 'Recent'-tab, so no need to search long time for the label you used previously. This 'Recent'-view can be cleaned up easily by hitting the Delete-key.

Combine with LabelMark™ 6!

Brady Workstation Print Partner and Brady Workstation Data Automation are companions to Brady LabelMark™ 6 Label Creation Software. LabelMark™ 6 offers easy label template creation.

BRADY WORKSTATION DATA AUTOMATION

AUTOMATE YOUR LABELLING PROCESS.

Add information straight from your ERP-system (such as SAP®)

Brady Workstation Data Automation allows you to easily integrate automated label printing in your workplace.

Brady Workstation Data Automation is designed to be simple. In just a few clicks you'll be up and running in no time:

- Select a label template
- Indicate where the data should be placed
- Select your printer.

It's the perfect solution for your labelling and integration needs: import data automatically from your system onto a predefined label and send it to the printer, all without human interaction!

Multiple channels

A channel is a combination of incoming data, label template and printer. Brady Workstation Data Automation comes by default with 5 channels, allowing you to configure 5 different input locations, templates and printers, all with your initial purchase. More channels can be purchased when required.

Consult the video of the Brady Workstation Print Partner and Data Automation system on line.

Reduce time, errors and accidental label layout changes

Automated label printing will reduce accidental errors, the need for user training and time needed for data entry.

Because end users never touch or modify the templates, you can rest assured that the data and labels are printed as intended. Without the need of user interaction, users never have to leave their ERP, LIMS or database system.

Printer compatibility

Brady Workstation Print Partner and Brady Workstation Data Automation can be used in combination with all current PWID printers with a Windows® printer driver: BMP™41, BMP™51, BMP™61, BMP™71, BBP™12, BBP™33, IPT™-Printer, BradyPrinter™-PR Plus.

The 8 to 10 year outdoor durability applies to the vinyl label stock only; ribbon durability will vary. A polyester overlamine is recommended for harsh environments - long term exposure to wind and rain.

* Average expected outdoor life of product will depend on user definition of failure, climatic conditions, mounting techniques and material colour. The 8 to 10 year outdoor durability applies to the vinyl label stock only; ribbon durability will vary. A polyester overlaminate is recommended for harsh environments - long term exposure to wind and rain.

* Average expected outdoor life of product will depend on user definition of failure, climatic conditions, mounting techniques and material colour. The 8 to 10 year outdoor durability applies to the vinyl label stock only; ribbon durability will vary. A polyester overlaminate is recommended for harsh environments - long term exposure to wind and rain.

HIGHLY REFLECTIVE IDENTIFICATION

Ideal for reading labels in low light conditions.

Order references beginning with "B" indicate bulk rolls. Order reference ending with "R" indicate that the sleeve is rotated on the liner.

WIRE & CABLE MARKING

SELF-LAMINATING LABELS

- Features a clear, non-printable area that wraps around the cable and serves as an overlamine to the printed text.
- Offers superior resistance to abrasion, dirt, oils, solvents and water.

WIRE & CABLE MARKING

WRAP AROUND LABELS

- These durable cloth wrap around labels are available with either an adhesive that allows the markers to be removed cleanly and reapplied if necessary (B-498) or with a permanent adhesive (B-437, B-499).
- A 3 mm overlap is recommended with these materials for an ideal, long lasting solution.

B-7598 POLYESTER CABLE TAG

The B-7598 polyester tag is a general identification tag for cables exposed to extreme conditions. It requires cable ties to apply to cables with various diameters. Common applications for this cable tag material are:

- Identification of multi-conductor cables
- Identification of cables in mobile phone towers
- Identification of datacom or telecom cables in general
- General cable identification that must be extremely resistant

WIRE & CABLE MARKING

LAMINAT™ CABLE MARKING CARRIERS

- Laminat™ Carriers come with a strip to laminate text labels.
- Carriers are fixed with two cable ties on the cables and wires for permanent identification.
- The Laminat™ Carriers can be used for any type of cable identification where permanency of the legend is crucial.

1. Pull the protective film backwards.

2. Place the label in the middle leaving space for sealing on all four sides of the label.

3. Seal the carrier by placing a finger on the film and pushing forward, thus rolling over the film and rolling off the silicon liner.

4. Always feed the cable ties from the top, thus bending down the Laminat™ carrier along the cable.

PERMA SHIELD™ LABELS

- These labels come with a separate overlaminate to be applied over the printed label.
- The label remains clear and easy-to-read, even in very harsh environments.
- The overlaminate extends outside of the label on each side when applied.

OUTDOOR GRADE VINYL LABELS

FOR 8-10 YEAR OUTDOOR USE

- Semi-gloss finish
- Good chemical, moisture, UV and weather resistance
- Highly pliable material conforms to rough and curved surfaces and equipment
- Average outdoor durability of the label is 8-10 years depending on the placement

i Average expected outdoor life of product will depend on user definition of failure, climatic conditions, mounting techniques and material colour. The up to 8 to 10 year outdoor durability applies to the vinyl label stock only; ribbon durability will vary. A polyester overlaminated is recommended for harsh environments - long term exposure to wind and rain.

BSP™45 WIRE ID SLEEVE APPLICATOR

Cable sleeves are a durable solution to keep wires and cables identified in challenging conditions. But applying a cable sleeve to hundreds of cables is quite time-consuming. Brady offers the BSP™45 Automated Sleeve Applicator to increase cable sleeve application speed and to reduce application cost. Cable sleeves can be printed on-site before they are applied with Brady's BP PR+ or BPP™72 Printer. Brady's BSP™45 Automated Sleeve Applicator is an easy-to-use, faster and more cost-effective alternative to manual sleeve application. It increases wire sleeve application speed by up to 6-10 seconds by automatically removing sleeves from the liner, opening and applying them to the wires. By eliminating the tedious task of applying hundreds of wire sleeves, it gives workers more time to focus on other important tasks.

Experience the benefits of the BSP45 Automated Sleeve Applicator at your facility:

- **FAST.** Up to 6-10 seconds faster than manual labelling.
- **EASY.** Eliminate the tedious, repetitive task of manual application that can lead to bottlenecks and repetitive motion injuries.
- **COST EFFECTIVE.** Save labour time and resources with quicker, automated application.
- **EASY-TO-USE.** Automatically removes sleeves from liner, opens them so a wire can be inserted, and applies them with the touch of a pedal from the operator.
- **RELIABLE.** Durable construction for high-volume, long term use.

Anyone who frequently uses and applies wire sleeves will enjoy the ease and efficiency of the BSP45 Applicator. It was specifically developed for intensive wire sleeve users, such as harness shops and panel buildings, in the aerospace, defense, rail, and chemical, oil and gas industries.

CIRCUIT BOARD IDENTIFICATION MATERIAL

Improve processes and reduce operating costs with clearly identified circuit boards.

Brady's circuit board material, or PCB labels, are polyimide labels that can withstand the high heats and powerful chemicals used in PCB manufacturing. Brady offers PCB labels in a variety of materials, including anti-static PCB labels and labels for auto-apply applications. These high-temperature circuit board materials can improve your processes and reduce operating costs by identifying your circuit boards throughout the entire PCB manufacturing process.

DID YOU KNOW?

Brady teamed up with ZESTRON, Kyzen and market leaders in high precision cleaning process solutions, to conduct extensive chemical compatibility testing on Brady's line of polyimide labels, which are commonly used as printed circuit board (PCB) identification labels.

According to the test results, all Brady polyimide labels submitted can successfully withstand ZESTRON and Kyzen's latest cleaning chemicals – these test results are critically important to circuit board manufacturers, as they ensure that Brady polyimide labels will stay adhered and legible throughout the whole circuit board production process including in-line aqueous cleaning systems.

FINDING THE CORRECT LABEL HEIGHT FOR YOUR SELF-LAMINATING LABELS

If you know your wire diameter or wire circumference, you can easily determine the recommended minimum and maximum label height by using the formulas below.

Step 1

Wire Diameter x 3.14 (pi) = Wire Circumference

Step 2

Wire Circumference + printable area height (allowing clear area to cover the printable area completely at least once) = Minimum Recommended Label Height

Step 3

Wire Circumference x 3 (allowing for label to wrap 3 times around wire) = Maximum Recommended Label Height

B-7644 LAMINAT™ CARRIERS

Colour: Yellow

Laminat™ Carriers come with a strip to laminate text labels. The carrier is to be fixed with two cable ties directly on the cables and wires. This dependable marking system enables you to permanently mark cables and wires.

The Laminat™ Carriers can be used for any type of cable identification where permanency of the legend is crucial.

1. Pull the protective film backwards.

2. Place the label in the middle leaving space for sealing on all four sides of the label.

3. Seal the carrier by placing a finger on the film and pushing forward, thus rolling over the film and rolling off the silicon liner.

4. Always feed the cable ties from the top, thus bending down the Laminat™ carrier along the cable.

STAINLESS STEEL WIRE AND CABLE TIES AND TAGS

Stainless steel tags and ties provide the highest performance option available for identifying cables and wires in the harshest environments. This durable material can withstand heat, UV, humidity and salt fog. In addition, it offers excellent resistance to oil and harsh chemicals such as skydrol, motor oil and gasoline.

Stainless Steel Tags

Stainless steel cable tags are made out of stainless steel 316 and are resistant to aggressive environments and temperatures up to 920°C.

- Can be laser engraved or embossed with any standard text, including serialisation
- Available in various widths and heights
- Available in blank stock, or factory-customised versions

Stainless Steel Ties

Extremely durable cable ties are available in grade 316 for almost any aggressive environment.

DURASLEEVE™ WIRE MARKER

The DuraSleeve markers consist of two components: a transparent tube (carrier) with a label pocket and an insert to slide into the pocket. Your text is at all times protected by the tube and can easily be replaced. Print the inserts on a Brady printer to ensure clean crisp readable legends every time.

B-7696 DURASLEEVE VINYL TAG MATERIAL

Colour: White, Yellow Finish: Gloss

Brady DuraSleeve printable inserts create a durable legend. The rigid construction of the DuraSleeve wire marking system provides inserts that can easily be inserted into a clean carrier. The legend can be changed before or after termination.

PERMASLEEVE™ WIRE MARKING SLEEVES

PERMANENT HEAT SHRINK WIRE IDENTIFICATION

Brady's non-adhesive, printable heat shrink wire marking sleeves fit snugly around wires or cables for maximum insulation protection and permanent identification. Brady's heat shrink sleeving is a full-circle design that provides fast and permanent wire marking. Clear, legible text can be printed on the wire and cable sleeving with a Brady printer for reliable wire identification.

Brady heat shrink sleeving materials excel in extreme environments, including temperature fluctuations and environments that require abrasion and chemical resistance. Brady offers a variety of materials available to print using thermal transfer and dot matrix printers.

How to Select a Wire Marker

There are four main questions to ask yourself when you're starting the process of marking wires. These questions will help you select a wire marker that best suits your needs.

1. Are you marking the wire after termination?

Sleeve markers can only be used before termination because they must be slipped over the open end of the wire. These non-adhesive markers provide flexibility as they can be moved prior to being heat-shrunk. Once shrunk, these markers fit snugly around wires for permanent identification which will stand up to harsh environments.

2. What size of wire are you marking?

The diameter of the wire determines the size of the sleeve or the height of the label to be used.

3. Will you print your own markers or purchase preprinted ones?

Pre-printed markers are available in a large variety of stock legends, and custom legends are available for any large jobs. These markers come in a variety of packaging and formats for ease of use and ease of transport. They are ideal for any application.

Printable markers are meant to be printed with variable legends as needed. Various methods for this include: portable wire marking printers or computer software linked to thermal transfer, dot matrix or laser-printers. An extensive array of sizes are available for every application. These printable markers offer the flexibility of printing legends on demand. They are also ideal for applications that require long legends.

4. In what type of environment will these wire markers be placed?

It is extremely important to select a wire marker material that will last for your application. Too many companies go to the trouble of marking only to have to do it all again because they did not select the correct material. Be sure to ask yourself these questions before you select your wire marker.

How to Select a Marker Size

Brady offers a variety of marker sizes for your wire marking needs. Please view the chart listed below to assist you in choosing the minimum recommended flattened sleeve height for the wire or cable that you are identifying.

All Brady ribbons are developed to meet the performance requirements of the materials to be printed. The reason for this is that the bond between the ribbon and the label is critical to the success of the legend permanence. Please refer to the Ribbon/Material Cross Reference Chart on the following page to determine the appropriate ribbon/material combination.

MATERIAL ADHESION COMPARISON

Adhesion is the attraction between unlike materials. The strength of the adhesion is determined by the surface energy of the item being identified. The higher the surface energy, the greater the likelihood for the label to adhere. A lower surface energy product will be more difficult for a label to adhere.

These following charts are based on relative adhesion after 24 hour dwell within each given surface energy category.

SMOOTH SURFACE (High Surface Energy)

Typical surface energy levels for this category are above 50 Dynes/cm.

- Stainless steel
- Copper
- Aluminium
- Smooth plastic
- Tin
- Glass
- Smooth metal

TEXTURED/ROUGH SURFACE (Medium Surface Energy)

Typical surface energy levels for this category are between 38-50 Dynes/cm.

- Cast Metal
- Nylon
- Alkyd enamel
- Polyester
- Epoxy paint
- Polyurethane
- ABS
- Polycarbonate
- PVC
- Acrylic

HIGHLY TEXTURED SURFACE (Low Surface Energy)

Typical surface energy levels for low surface energy products are below 38 Dynes/cm.

- Polystyrene
- Acetal
- Polyethylene
- Highly textured polypropylene
- Teflon
- Powder Coatings
- Highly textured ABS
